

## Product Data Sheet

# StableFX

Mineral solution for optimal air quality & hygiene in the horse stable

StableFX is a very soft, easily spreadable, and highly absorbent hygiene powder used for creating a dry, hygienic, and comfortable horse box. StableFX has been developed to optimise stable hygiene and air quality, but also possesses the manure and soil improving characteristics of FX minerals.

StableFX has been specially designed for use in the horse box. Unlike lime-based products that provide enhanced ammonia volatilization, StableFX achieves a high hygienic level based on natural (clay) minerals. With an unparalleled high absorbency capacity, StableFX can bind large amounts of moisture and ammonia. This creates a very unfavourable climate for bacteria and fungi and ensures a greatly improved hygiene and air quality in the stable.

### Physical properties

Bulk density	≈ 800 kg/m <sup>3</sup>
Colour	Grey
Form	Powder
Scent	Citronella

Composition Based on specially modified clay minerals

CEC ≈ 1350 Meq/kg

Packaging 12 kg bucket

Stable hygiene ★★★★★

Manure improvement ★★★

Soil improvement ★★★

As far as we can judge, the above information is correct. However, we cannot give you any guarantees about the results you will achieve with this. This description is offered to you on the condition that you decide for yourself to what extent it is suitable for your purposes.

## **Box & Stable Climate**

The advantages of StableFX in terms of Box & Stable climate are threefold;

- StableFX has an unparalleled high natural moisture absorption, creating a dry and comfortable box with a positive effect on the health of the horse. By means of specially modified (clay) minerals, StableFX tackles the breeding ground of bacteria and fungi due to the high moisture absorption. This greatly reduces the chance of developing nasty bacteria.
- StableFX contains specially modified (clay) minerals with a very high absorbency of ammonia (nitrogen). This improves air quality in the box and the immediate surroundings, resulting in a fresher stable air and fewer flies.
- StableFX contains a mix of (clay) minerals that have a strong nourishing effect on the skin and hoof, positively impacting horse health.

## **Soil improvement**

- StableFX promotes the CEC of the soil and prevents the leaching of nutrients. It contains useful trace elements.

## **Application**

It is recommended to apply a layer of StableFX before adding straw or other litter in the stable. After this, 50 grams per m<sup>2</sup> can be added daily over the bedding. When necessary, more product can be added to the horse box when even higher moisture absorption is needed.

StableFX is developed and produced by Cebo Holland. The product has been extensively tested at multiple locations. Cebo Holland has more than 40 years of experience in processing (clay) minerals, including t.b.v. animal feed.
